

NC5 Frame (Non-Cantilevered Five-Member Frame)

Example of RoofScreen NC5 Frame Configuration

Description:

The NC5 is a heavy-duty frame designed for tall equipment screens and high wind areas. It consists of 5 round galvanized tube members, stainless steel connector fittings and our Square Base Support system which allows adjustment for roof slope and a watertight connection. With this configuration the vertical tube is connected directly to the front Base Support. This greatly increases strength of the frame but takes away front-to-back adjustability of the screen face. This means the Base Supports must be installed in a perfect line to have a straight screen.

Application:

NC5 frames are designed to be used as the primary structural supports for equipment screens on flat and low sloped commercial rooftops. The frames can accommodate virtually any type of face panels or materials to achieve the desired aesthetics for the building. The Base Support system can attach in a watertight manner to any type of roof construction, occasionally needing additional structural blocking or reinforcement.

Materials/Components:

Tubing:

- High-strength Gatorshield Galvanized Steel Tubing. Superior corrosion resistance with triple layer of protection conforming to the highest standards of ASTM A1057.
- 2.5" O.D., 16ga and 11ga.
- Minimum 50 ksi yield and 55 ksi tensile.

Connector Fittings:

- Formed from AISI Type 304 Stainless Steel.
- Mill finish.

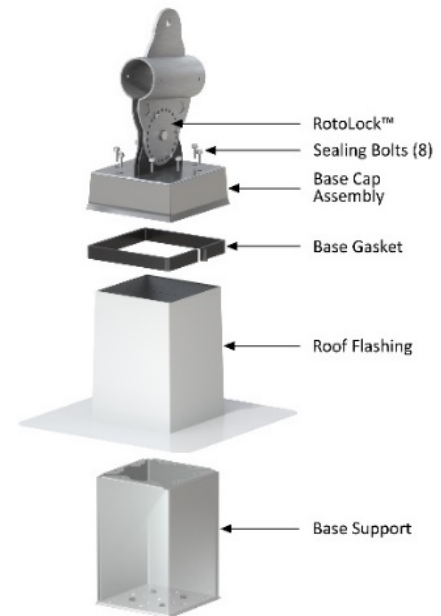

Hardware:

- Nuts and bolts used for connectors are corrosion resistant 18-8 stainless steel.
- Tek Screws and Sealing Bolts are carbon steel with premium coating.

Roof Connections:

- RoofScreen's Square Base Roof Attachment System.
- Welded steel Base Support – shop primed.
- Flashing boot matching roof type.
- Foam rubber gasket for added protection from ice and splashing water.
- Stainless steel Base Cap with integral counter-flashing.

Structural Notes:

The modular design allows the frame configuration and spacing to be adapted to any wind load. In high wind load regions, the frames are installed closer together and use heavier materials. The Square Base Support system is adjustable for roof slope and features our RotoLock™ mechanism which allows it to be locked together after adjustment, creating a moment absorbing connection and reducing the torque that would otherwise be transferred into the roof structure.

All projects require analysis and calculations by a licensed professional engineer to ensure the design is appropriate for the specific conditions that apply.

Installation:

For typical RoofScreen projects, the frame tubes are delivered pre-cut based on the dimensions of the tallest frame on the project. Depending on the amount of roof slope, some tubes may require field trimming during installation. The installation consists of connecting the tubes together with pre-assembled fittings, adjusting for levelness then locking them together with self-drilling tek screws. With NC5 frames it is critical to perfectly align the front base supports from frame to frame to ensure the screen face is in plane. A full installation manual is available, and most projects include full shop drawings showing project specific details.

Warranty:

When the system is designed and engineered by RoofScreen Mfg., we include a 20-year limited warranty.
